

Flowtable: Evolution of the Sample Size

Sample progression	N: Authors (Works)	Difference	%
Raw data	984 (7304)	/	100% (100%)
Remove cases: missing institution	448 (3897)	-536 (-3407)	45.5% (53.4%)
Remove cases: missing country	446 (3870)	-2 (-27)	45.3% (53%)
Remove cases: missing new vars	446 (3866)	0 (-4)	45.3% (52.9%)

1) "New vars" refers to variables that were manually inferred from the data. 2) Some analyses require additional cleaning of missing values; where applicable, the corresponding sample size (N) is reported. 3) 678 cases of multiple affiliations per author (per work) were flattened to the first affiliation (9.3% of all works).
