

Documentation: Research Performance and Migration Report

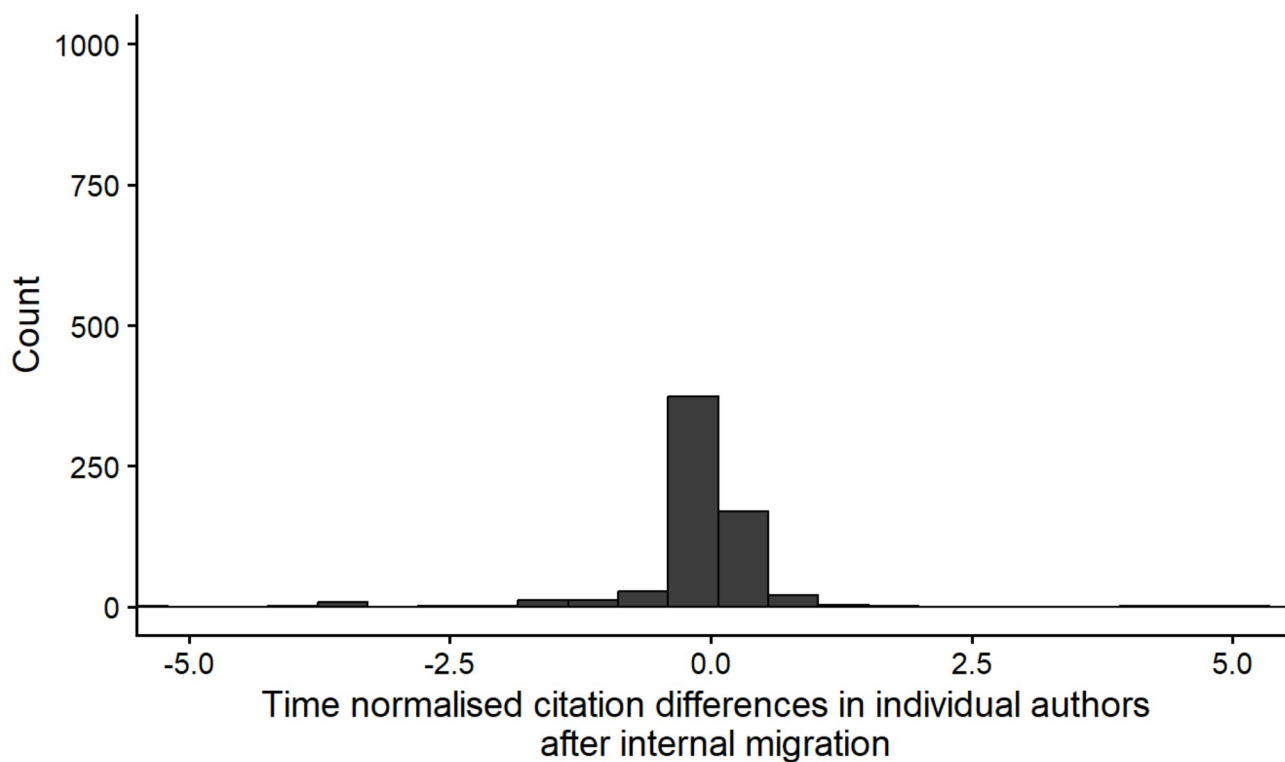

AUTHOR
Tom Weick

PUBLISHED
June 28, 2026

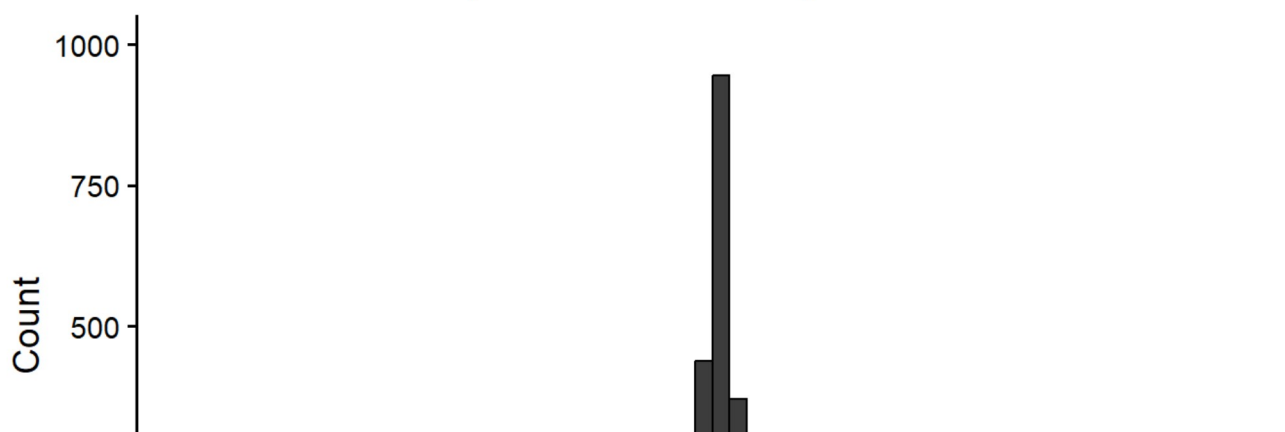

Results

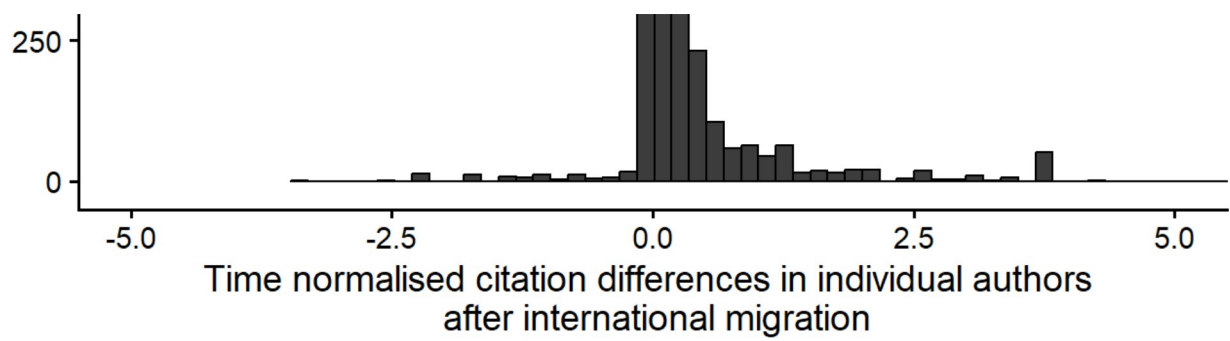

Univariate

Histogram: Time Normalised Citation Differences
in Individual Authors After Internal Migration
N Works = 642 , N Authors = 78 , Mean = -0.061

Histogram: Time Normalised Citation Differences
in Individual Authors after International Migration
N Works = 2607 , N Authors = 76 , Mean = 0.366

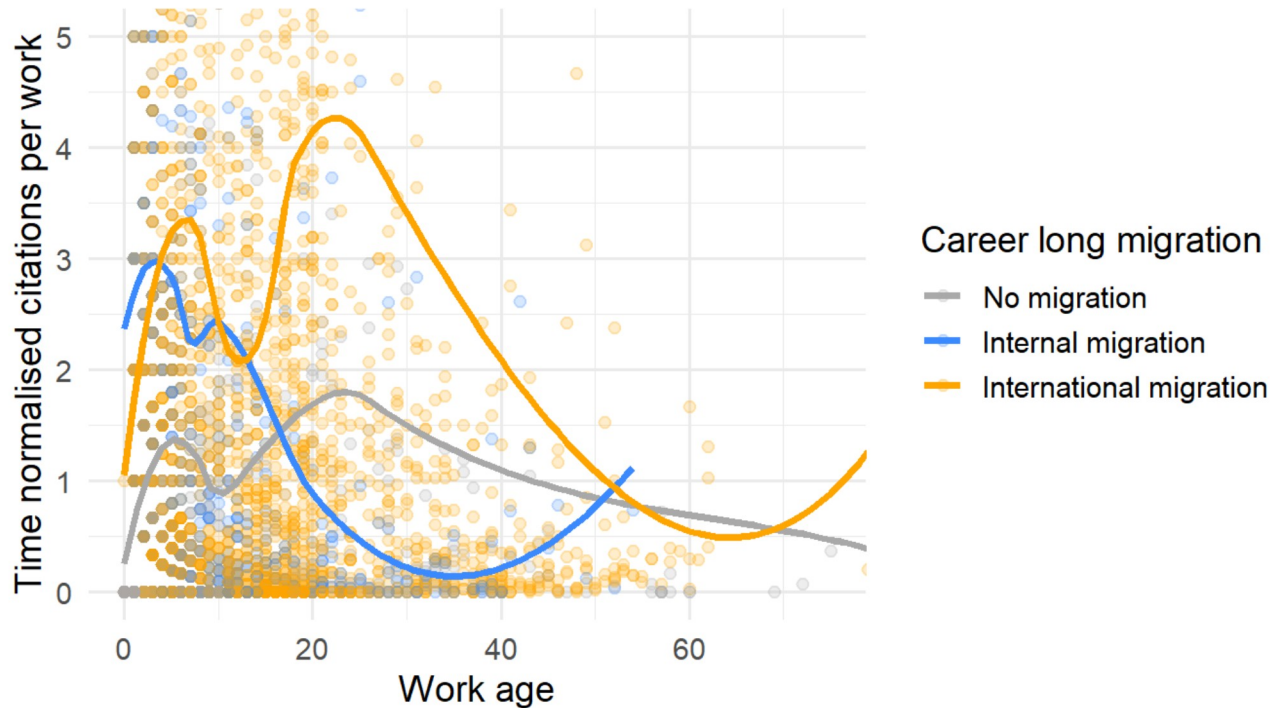

Bivariate

``geom_smooth()`` using formula = `'y ~ x'`

Scatterplot:
Time Normalised Citations and Work Age
by Migration Groups
N Works = 3866 , N Authors = 446

Technical

Sample evolution

Flowtable: Evolution of the Sample Size

Sample progression	N: Authors (Works)	Difference	%
Raw data	984 (7304)	/	100% (100%)

Remove cases: missing institution	448 (3897)	-536 (-3407)	45.5% (53.4%)
Remove cases: missing country	446 (3870)	-2 (-27)	45.3% (53%)
Remove cases: missing new vars	446 (3866)	0 (-4)	45.3% (52.9%)

1) "New vars" refers to variables that were manually inferred from the data. 2) Some analyses require additional cleaning of missing values; where applicable, the corresponding sample size (N) is reported. 3) 678 cases of multiple affiliations per author (per work) were flattened to the first affiliation (9.3% of all works).

Data structure

Rows: 3,866

Columns: 15

Report Versioning

Report Parameters

Authors: 446

Works: 3866

Authors % of full data: 45.3%

Works % of full data: 52.9%

Key Indicators

KI 2: Mean citation difference after internal migration:

0.365748646797754

KI 1: Mean citation difference after international migration:

-0.0613535159745624

Internal identifier for the report Versioning
